Letterbox-Bulk-Container, kurz *Bulktainer*. Erfunden wurde das Prinzip, schüttfähige lose Ware (»*Bulk*«) mit grossen Plastiksäcken hygenisch sauber getrennt (»*bag-in-box*«) im Containerformat zu transportieren, bereits in den 1970er Jahren beim ehemaligen britischen Betreiber IFF (United Transport). Die Bezeichnung »*Letterbox*« tragen diese Behälter, weil die Entladeöffnung einem Briefkastenschlitz ähnelt. Entladen wird dabei meist über Schwerkraft bei gekipptem Behälter, alternativ mit Unterdruck.

Natürlich erhalten unsere Letterbox-Bulktainer neben allen vorbildgerechten Anschriften an Seiten und Fronten auch die vollständige Dachdekoration und nicht etwa einen bislang scheinbar brankchenüblichen Spardruck. Nicht ohne Grund machen wir bisweilen unmögliche Klimmzüge, um den Büchsen aufs Dach zu schauen …
